

The Social Hotspots Database (SHDB) provides social risk data on a sector and country level (www.socialhotspot.org) and is integrated with a global input - output model derived from the GTAP database. It allows modeling of social impacts and risks and can easily be imported into the free openLCA software (www.openLCA.org). Note that the SHDB License is not bound strictly to openLCA, it allows you to import the database into other LCA software.
